Datasaur's solutions enhance the speed and accuracy of various labeling projects by up to 80%, enabling data scientists to focus on model development instead of tedious or repetitive tasks.

About Datasaur

Datasaur provides robust solutions for data labeling and LLM development use cases. For our NLP Labeling products, we support a wide variety of project types, from span labeling to document classification, PDFs to audio. We also offer various automation tools such as LLM-assisted labeling, data programming, and predictive labeling, all aimed at enhancing the speed and accuracy of user projects. Additionally, through LLM Labs, users can build and train private LLMs while monitoring cost, speed and quality. At our core, we are committed to furthering the adoption and development of production-ready AI.

NLP Labeling:

1) Label anything. The Datasaur platform supports comprehensive labeling abilities for all things NLP: span, classification, audio, OCR, bounding box, and more.

2) Automate your labeling. Datasaur's large AI team is building new automation tools every quarter, so you can automate most of your labeling tasks. Predictive labeling, data programming, LLM integration, active learning, and much more are all easily accessible.

3) Ease of labeling. Datasaur's labeling interface is easy to use for non-technical personnel. The platform has been matured by the labeling use of doctors, lawyers, and many other non-technical personas.

LLM Labs:

1) Explore LLMS. There are new LLMs hitting the market every single week. LLM Labs enables the user to explore over 200 LLMs and immediately test their ability in one single workspace.

2) Contextualize any LLM. Users can build a vector store with their knowledge and context they want the LLM to know.

3) Compare quality and cost. LLM Labs' Playground workspace allows the user to compare multiple LLMs simultaneously against the same prompts like LLama3 vs GPT4o.

ABOUT WINVALE

Winvale has extensive experience helping the public sector procure solutions. By partnering with a wide range of vendors on our GSA Multiple Award Schedule, we're able to provide government buyers with the products and services they need. Our partners currently support all levels of government including Federal, State, Local and Educational (as allowed by contract type) agencies and institutions.
